

TMC SIP Business Command provides superior delivery of SIP services. Including SIP origination, SIP termination, toll-free and nationwide DID's.

Built for enterprise businesses with high-volume calling, TMC SIP BusinessCommand delivers robust, business-class SIP services that result in direct cost savings, productivity improvements, and the fast implementation of new applications. Achieve total network control, efficiency and the highest level of quality (QoS) possible: all with no capital investment. Plus you'll realize dramatic cost savings immediately by least cost call routing via TMC's 20-carrier nationwide network.

Network Diagram

(1) A telephone call is made (2) It routes through PSTN (3) Then to the SIP/Media gateway via TMC's 20 carrier network (4) Through the Internet (5) Call then goes to the TMC switch (in NY or LA) (6) Through the Internet (7) Then to the customer IP PBX (8) Call terminates to SIP phone *Example shown is an inbound call*

Highlights:

- **Business Continuity:** Provisioning includes disaster recovery security utilizing TMC's 20-carrier nationwide network. Multi-switch platform locks down security and redundancy
- **Cost Savings:** Achieve the highest level of cost savings by least cost routing your inbound and outbound traffic
- **Enhanced Toll-Free & Local Service:** Get great control with TMC's feature rich toll-free and local services including: dynamic toll-free routing, E911 and more. Create a local presence, manage advertising campaigns and conduct market research with nationwide DIDs
- **Dynamic Re-routing:** Simplify call management. Load balance incoming calls, overflow busy end points to alternative locations that have capacity and priority route incoming calls to specific endpoints
- **Flawless Quality & Implementation:** Your mission critical voice traffic receives superior service delivery and reliability via TMC's carrier-grade network. TMC's sales engineering experts get service up and running in days. And assist through every step of the process to ensure flawless execution of service
